Dual Port Couplings Added to CPC Quick Disconnect Products

Attractive, high-quality appearance for flexibility and variety of application uses

St. Paul, Minn. – September 9, 2015 – [CPC \(Colder Products Company\)](#), the leading provider of [quick disconnect](#) couplings and fittings for plastic tubing, announces the addition of the [DPC Series Couplings](#) to its quick disconnect product offering. Designed specifically for use with dual fluid lines, the DPC Series couplings offer intuitive, simultaneous connections and disconnections with a single thumb latch.

“By adapting our proven valve and latching mechanism into a single connector for two lines, the DPC couplings provide quick and easy-to-use connector options for any thermal cooling loop,” says Jim Brown, business unit manager, medical and industrial markets. “As with any multiline connector from CPC, the DPC Series ensure multiple lines are connected properly and in less time.”

The ¼" flow DPC Series couplings, offered in acetal thermoplastic, are available in valved and non-valved hose barb configurations and are keyed to ensure correct directional flow. With integral terminations, the DPC couplings have greater reliability, shorter assemblies and faster installations.

[DPC Series](#) quick disconnect couplings are ideal for liquid-based thermal management systems, applications using dual lumen tubing or medical therapies circulating cooling fluids. To discuss how your fluid handling application will benefit from integrating DPC Series couplings, or any of the other 10,000+ innovative connection solutions CPC offers, visit cpcworldwide.com.
